Comp 7006 - Lab #5

System Monitoring – Remote Logging

Due Date: October 20, 2009
Work in groups of **two**.

Objective: To set up a remote logging server .

Your Mission:

We have covered all the system logging facilities available on Linux in the lectures. Your task is to setup one of the machines is the lab as a logging server. Then configure a second machine to send all it log files to that server. Generate several types of events that will get logged at the server.

Requirements:

1. Demonstrate your working logging server in the lab.
